A Science-Based Approach to Evaluating Trees in Urban Developments

with Lindsey Purcell

Join the Miami-Dade Chapter of the LIAF for an engaging professional development session focused on Best Management Practices for tree evaluation and documentation. Learn how to assess tree condition consistently, document observations clearly, and develop accurate and defensible development decisions.

Lindsey Purcell is a Registered Consulting Arborist and former Purdue University educator and Extension Specialist with more than three decades of leadership in arboriculture, urban forestry, and professional education. He is nationally recognized for translating arboricultural science into practical, defensible decision-making for municipalities, utilities, and industry professionals.

Lindsey is the author of *Arboricultural Practices: A Science-Based Approach* (2025) and a contributor to ISA certification resources. His work focuses on tree appraisal, risk assessment, pruning, diagnostics, professional ethics, and urban forest management, combining academic rigor with extensive field experience.
